## Press Release

### **PRIMES-Workshop on Laser Beam Diagnostics from September 07 to 08, 2016**

PRIMES is pleased to invite you to the 7<sup>th</sup> Workshop on beam diagnostics in an industrial environment. It will take place at the Schenck Technology- and Industrial Park in Darmstadt, Germany, from September 07 to 08, 2016. You can look forward to an interesting program, top-class speakers as well as networking opportunities in a pleasant atmosphere.

This year our foci are on:

- Tool control in laser material processing
- Online-sensors for beam control in the production process
- Innovations in the field of laser beam diagnostics
- Application reports from the laser industry

All the presentations are interpreted simultaneously into English for our international guests.

The program is rounded off by a „PRIMES Open House“ with application-related presentations in our laboratories as well as the possibility of a PRIMES company tour in Pfungstadt.

The Workshop is intended for laser users, plant engineers as well as beam source manufacturers and is supposed to serve as a platform for an in-depth exchange of ideas, possibilities, and perspectives with regard to the field of laser beam diagnostics.

Further information as well as the registration form for the Workshop can be found on our homepage [www.primes.de](http://www.primes.de).
